Continuation of Substance of Interview including description of the general nature of what was discussed. March 22, 2007: Agreement was reached that amending claim 1 to set forth that there was a single chamber pressurized interior within which the pump assembly and the solenoid valve were mounted and that the air does not pass through another housing after exiting the single chamber pressurized interior would define over the prior art. Specifically, In Price there are plural pressurized interior chambers and the solenoid valves and the pump assembly are in separate chambers. In Robertson there are no valves in the chamber which houses the pump assembly and there is an additional housing which encases the whole assembly. March 27, 2007:The applicant agreed to the insertion of chamber after "single" as set forth in the Examiner's Amendment.
